## SUMMARY

AI Software Engineer building production agentic AI systems, LLM services, and RAG pipelines with LangGraph, LangChain, and Model Context Protocol (MCP). Integrates commercial LLM provider APIs (OpenAI, Google Gemini) and open-source models (Meta Llama) into production-grade backend services and REST APIs on AWS with Docker and CI/CD. Shipped an agentic lead-qualification system that cut response latency 40% and served 3+ downstream business systems; generalist across backend, AI integration, and cloud infrastructure.

## CORE SKILLS

**Agentic AI & LLM:** LangGraph, LangChain, Model Context Protocol (MCP), multi-agent systems, agentic workflow orchestration, tool calling / function calling, model routing and selection, prompt engineering (chain-of-thought, few-shot, role-based), context engineering, LLM output evaluation, re-rankers, n8n

**RAG, Vector DBs & Providers:** Retrieval-Augmented Generation (RAG), Pinecone, Chroma, FAISS, Cogne Knowledge Graph, embeddings, retrieval pipeline design; OpenAI API, Google Gemini API, Meta Llama, Hugging Face

**Languages & Backend:** Python (primary), FastAPI, Flask, Django, REST APIs, GraphQL, JavaScript / Node.js, Java (familiar)

**Cloud, DevOps & Distributed Systems:** AWS, Docker, Kubernetes, CI/CD pipelines, GitHub Actions, Git, Terraform, async workers, Redis queues, rate limiting, retries, load balancing, concurrency control, observability, post-deployment monitoring

**Data & ML:** PyTorch, TensorFlow, NLP, neural networks, computer vision, data preprocessing pipelines, PostgreSQL, MongoDB, Redis

## EXPERIENCE

**Junior Software Developer** — NinjaHire Jun 2026 - Present

- Ship new platform features end-to-end across backend services and user-facing workflows, owning delivery from technical design through code review, deployment, and post-release monitoring.
- Diagnose and resolve client-reported production defects, reducing recurring incidents and improving platform stability and reliability.
- Partner with cross-functional product and engineering stakeholders to turn reported pain points into prioritized, shipped improvements to core user journeys.

**SDE Intern - AI** — 9AI Sep 2025 - Jun 2026

- Architected and shipped an end-to-end **agentic AI system** using **LangGraph** orchestration, **Model Context Protocol (MCP)** tool calling, and **RAG pipelines** backed by **Pinecone and Chroma** vector databases, automating sales lead qualification and cutting response latency by **40%**.
- Built and deployed AI/LLM backend services as **REST APIs in Python (FastAPI)**, containerized with **Docker** and released through CI/CD, serving **3+ downstream business systems** and enabling real-time lead scoring.
- Applied chain-of-thought, few-shot, and role-based **prompt engineering** across multi-agent workflows, reducing manual review overhead by **~30%** and improving output consistency and relevance at scale.
- Integrated commercial LLM provider APIs into existing business systems, applying retry, rate-limiting, and observability patterns to keep AI-integrated workflows accurate and reliable in production.

## PROJECTS

**LangGraph Multi-Agent Cybersecurity Platform** Personal Project

- Engineered a **multi-agent system** with **LangGraph** and **Meta Llama**, implementing model routing and selection, async worker orchestration, and concurrency controls for parallel vulnerability detection across distributed systems.
- Integrated modular security tools (Nmap, Gobuster, FFUF, SQLMap) as agent-callable tools with **RAG**-backed context grounding via **Chroma** and the Cogne Knowledge Graph, load-balancing across agents to scale scanning and surface **1,500+ findings**.

## EDUCATION

**B.Tech, Computer Science** — Techno India NJR Institute of Technology, Udaipur Sep 2022 - May 2026

CGPA: 8.65/10 | Relevant coursework: Machine Learning, Distributed Systems, Software Engineering

## AWARDS & RECOGNITION

- WHO Letter of Recognition** — real-time geo-tagged monitoring platform for tracking unvaccinated children.
- 1st Place, OxGenIgnite Hackathon (NIT Goa)** — led fiat-to-fiat crypto swap build on Stellar using Soroban smart contracts.
- 2nd Place, CodeRed 4.0 Hackathon** — deep-learning CNN diagnostic system trained on a 10,000+ image X-ray/CT dataset.
